

Client Deactivation Report Standard operation procedure.

Shows how many weekly hours we lose each month when clients are deactivated, and why. Use it to set monthly growth goals: the hours we need to win back just to stay level. It also shows warning signs (cancellations, falling hours) in clients who are still active.

2. Before you start

Open the tool in Chrome or Edge (or use RAH website). You need two WellSky exports, both like Excel file. Reports that you need to download:

The screenshot shows the RAH reports tool interface. On the left, there is a sidebar with a list of reports. The report 'AP - Liz Client's Carelogs' is highlighted with a red box. On the right, there is a data table with columns for Client Address 2, Client Location, Client City, Client Zip, Caregiver Name, Client Tags, Status, Scheduled Clock In, Scheduled Clock Out, Bill Total Hours, Bill Total, Bill Rate Amount, and Bill Method. The table contains data for various clients and caregivers, including Tashiana Griffin, Wendy Davis, Weston Byers, Andrea Milligan, Jenna Jones, Rachael Martinez, Marilyn Meyer, Carl Valdez, Dolores Hill, Robin Mikulec, Deatrice Gipsom, LaGeri Perrino, Margie Gelsindo, Virginia Perez, Hemlinia 'Minnie' ..., Mycala Micheli, Karen Hyman, Karl Collins, Anna Cartwright, Araceli Lopez, Helen Green, and Angela Neal.

Report	What to export	Date range
AP- Liz Monthly Report - Clients	All clients, active and deactivated (keep the columns as WellSky exports them).	None. Export everything.
AP- Liz Client's care logs	All clients, all statuses.	The last 2 full months up to the end of the month you analyze. Example for August: Jul 1 to Aug 31.

Tip: WellSky .xls files hold about 65,000 rows. If the care logs are too large, export one month at a time and load both files together.

1. Click **Choose File** under *Clients report* and select the clients file.
2. Click **Choose File** under *Care logs by client* and select the care log file(s). You may select several at once.
3. Choose the **Month to analyze**. It defaults to last month.
4. Leave the parameters at their default values unless you want something different. Click **Run report**.
5. Read the report on screen. Use **Download Excel** to keep a copy or **Print / Save PDF** to share it. Save the file as *Deactivation Report YYYY-MM*.

Client Deactivation Report

Weekly hours lost from client deactivations, by month — Right at Home Central Texas. Files are processed only in your browser; nothing is uploaded.

1. Load the WellSky exports

Clients report (.xls) all clients, as exported from WellSky

Care logs by client (.xls) the 2 months up to the end of the month analyzed; several files allowed

Choose File clients.xls Choose Files care-logs-by-client (1).xls

2. Parameters

Month to analyze: August 2026

Look-back window (weeks) before last completed visit: 4

24-hour care threshold (hrs/week) at or above = separate category: 100

Cancellation alert (%) client or caregiver, last 4 wks: 25

Hours-drop alert (%) last 2 wks vs previous 2 wks: 30

Run report Done.

*care-logs-by-client (1).xls: column "First Name" not found. Is this the right report?

Clients: clients.xls — 4,808 rows.

Care logs: care-logs-by-client (1).xls — 11,773 rows.

Download Excel Print / Save PDF

Summary - August 2026

44
Clients deactivated
35 with measurable hours

1,055
Weekly hours lost (all regular + 24-hour care)

320
Weekly hours lost (regular)
31 clients

10.3
Average per client (regular)
hrs per week

8.0
Median per client (regular)
hrs per week

4 / 734 h
24-hour care clients separate category, hrs/wk

18%
% of weekly volume lost volume = 5,872 h/wk this month

5%
Regular only, % of volume without 24-hour care

Method: for each client deactivated in the month, completed billed hours in the 4 weeks ending on the last completed visit, divided by 4. Cancelled visits are not counted as hours. 24-hour care = 100+

Check first: a yellow box at the top means the care logs do not fully cover the month. Fix the export and run again before using the numbers.

4. How to read the report

Section	What it tells you	How to use it
Summary tiles	Weekly hours lost = hours per week those clients were receiving before they left. Average and Median are per client. % of weekly volume compares the loss to our total weekly hours.	The median is the typical client. The average is pulled up by a few very large clients. Use the regular figures to set goals.
By reason	Hours lost split by why the client left. On Hold is highlighted and counts as lost hours.	Focus on reasons we can influence (Dissatisfied, Chose Other Provider). Deceased and facility moves are mostly unavoidable.
24-hour care clients	Clients with 100+ hours per week. Shown apart because one client can outweigh 20 regular ones.	Plan for these separately: replacing one takes a different kind of client.
Office, payer, tenure	Where the loss is concentrated.	Set office or payer targets where the share is highest. Many losses in the first months point to onboarding.

Section	What it tells you	How to use it
Behavior before deactivation	Compares clients who left with active clients: cancellations by client and caregiver, number of caregivers, and drop in hours.	A gap between the rows is a warning sign, not proof of cause. Numbers get more reliable after several months.
Active clients with warning signs	Active clients with high cancellations or falling hours (red tags).	Check what is the cause with more percentage of occurrence.
Detail and no-visit list	One line per deactivated client. The last list shows clients with no completed visits, so no hours could be measured.	Use the detail to check a number against WellSky. The no-visit clients are not in the averages.

5. Key rules

- **Hours per client** = completed billed hours in the 4 weeks before the client's last completed visit, divided by 4. Cancelled visits do not count.
- **Which month** a client belongs to is set by the Date deactivated in WellSky.
- Clients cannot be scheduled after deactivation, so their last visit is the reference point.
- Notes such as *New client* mean the client had less than 4 weeks of service, so the weekly average may be low.

6. If something looks wrong

Problem	What to do
Error says a column is missing	The wrong report was loaded, or columns were removed. Export again without changing columns.
Yellow warning about dates	Export care logs for the full 2 months and run again.
Very few clients or zero hours	Check that both files are for the same period and the month selected is correct.
A note says Duplicate name	Two clients share a name. Check that client in WellSky before using the number.
